Dear [Hiring Manager]

[Company Name]

I am writing to apply for the **Junior Python Developer / Code Reviewer** role at [Company Name]. I enjoy the discipline of reading code as closely as writing it, and I would welcome the chance to help keep a Python codebase clean, tested, and easy for the next person to maintain.

As an Information Systems Engineering student, I have built and maintained real Python projects on my own – a FastAPI service (Andromeda API), a document-parsing pipeline (DocParser), and a text classifier – applying SOLID principles, writing tests before fixing bugs, and using tools like `black`, `ruff`, and `mypy` to keep the code honest. I am comfortable with Git and GitHub workflows: branching, resolving merge conflicts, and reviewing pull requests with a critical eye. I also practice Data Structures & Algorithms regularly on LeetCode, which keeps my reasoning about correctness and complexity sharp – exactly what a good reviewer needs.

I make deliberate use of AI-assisted tools such as Claude Code and GitHub Copilot: they help me verify my reasoning, research unfamiliar patterns quickly, and catch what a first pass misses, but never replace my own understanding of the code I ship. I bring that same discipline to reviewing others' work – checking not just that it runs, but that it is correct, readable, and maintainable.

I would be grateful for the opportunity to bring this attention to detail, and my genuine enthusiasm for clean, well-tested Python, to your team. Thank you for your time and consideration – I look forward to the possibility of speaking with you.

Sincerely,

Angel Stward Segura Mendez

Information Systems Engineering Student — Universidad Nacional (UNA), Costa Rica
