PROFESSIONAL SUMMARY

Systems Engineering student and aspiring **Cybersecurity Engineer** with a builder's mindset: I understand systems deeply because I design, code, and deploy them. Practical foundation in Linux, networking, secure API design, authentication, and threat modeling, with active self-study in offensive and defensive security. Seeking a security-focused role (AppSec, Cloud Security, or SOC/Blue Team) to apply secure-by-design principles and earn certification.

TECHNICAL SKILLS

Security Domains: Application security (OWASP Top 10), authentication & authorization, threat modeling, secure SDLC

Offensive (learning): Network/web enumeration, Nmap, Burp Suite, vulnerability assessment, CTF practice

Defensive: Linux hardening, log analysis, secure configuration, secrets management, principle of least privilege

Cloud & Infra Security: IAM fundamentals, container security (Docker), Firebase security rules

Languages & Tools: Python, Bash, SQL, JavaScript/TypeScript, Git/GitHub, Linux

Currently strengthening: CompTIA Security+ / CySA+, TryHackMe & Hack The Box paths, SIEM (Splunk/ELK), cloud security (AWS), penetration-testing methodology

KEY PROJECTS

SecurePipe — Secure Pipeline Concept

2025

Personal project — Security design

In development

- Designed a security-oriented project centered on protecting data/processing pipelines, including threat surface analysis and mitigation strategy.
- Applied secure-by-design thinking to architecture, access control, and operational risk.

Andromeda API — Secure REST API

2025

Personal project — FastAPI + Firebase

github.com/SeguraStward

- Implemented authentication flows, input validation, and access control to protect API endpoints against common web vulnerabilities.
- Managed configuration and secrets separately from code; applied least-privilege access to backend resources.

Quality Assurance & Test Automation

2025

Academic project (UNA) — NestJS, Prisma, Jest

Costa Rica

- Wrote unit and module test suites validating business logic and input handling, reinforcing reliability and resistance to edge-case failures.
- Produced professional testing evidence and documentation following structured QA practices.

EDUCATION

B.Sc. in Information Systems Engineering

In progress

Universidad Nacional (UNA), Costa Rica

Expected 2026–2027

- Relevant coursework: Operating Systems, Computer Networks, Databases, Software Engineering, Algorithms.

LEARNING ROADMAP & TARGET CERTIFICATIONS

- **In progress / planned:** CompTIA Security+ → CySA+ / PenTest+; eJPT (eLearnSecurity Junior Penetration Tester); (ISC)² CC; AWS Security fundamentals.
- Active hands-on practice on TryHackMe / Hack The Box and Capture-The-Flag challenges.

LANGUAGES

Spanish: Native

- **English:** Professional working proficiency (B2)
