PROFESSIONAL SUMMARY

Information Systems Engineering student and detail-oriented Python developer who reads code as carefully as I write it. Solid foundation in Data Structures & Algorithms, Git/GitHub workflows, and clean-code principles (**SOLID**, **TDD**). Comfortable reviewing pull requests, spotting bugs and design smells, and writing clear, actionable feedback. I use AI-assisted tools (Claude Code, GitHub Copilot) deliberately – to verify reasoning and catch what a first pass misses, never as a substitute for understanding the code. Looking for an entry-level role reviewing and maintaining Python codebases.

TECHNICAL SKILLS

Languages: Python (primary), C++, Java, TypeScript/JavaScript (basic)
Code quality & review: PEP 8, type hints, docstrings, black, ruff/flake8, mypy, pre-commit hooks, reading diffs & pull requests critically
Software design: SOLID principles, TDD (red-green-refactor), clean/layered architecture, basic design patterns
Version control: Git (branching, rebasing, resolving merge conflicts), GitHub (pull requests, issues, code review, GitHub Actions basics)
Data Structures & Algorithms: Arrays, linked lists, trees, graphs, hashing, sorting/searching, complexity analysis – practiced on LeetCode
Testing: pytest, unittest, Jest (Node.js), writing tests before fixing bugs
Databases & tools: SQL (PostgreSQL/MySQL), Firebase/NoSQL, Docker, Linux, Bash
AI-assisted development: Claude Code, GitHub Copilot, ChatGPT – for code review support, debugging, and accelerated learning
Currently strengthening: Contributing to open-source Python repositories, CI/CD pipelines (GitHub Actions), advanced design patterns, Sphinx documentation

KEY PROJECTS

Andromeda API 2025
github.com/SeguraStward
Personal project — Python (FastAPI) + Firebase
➤ Designed and built a production-style Python REST API with validated endpoints, authentication, and a maintainable, layered architecture reviewable by others.
➤ Kept a clean commit history and used Git branching to isolate features, mirroring a real code-review workflow.

DocParser — Document Data Extraction 2025
github.com/SeguraStward
Personal project — Python
➤ Built a parsing pipeline that extracts structured data (e.g., invoices) from documents, applying validation and normalization for reliable output.
➤ Refactored early versions for readability and single-responsibility, applying SOLID principles as the codebase grew.

Spam Classifier 2024–2025
github.com/SeguraStward
Personal project — Python
➤ Test-first text-classification script: unit tests for preprocessing and prediction logic written before hardening the code, then self-reviewed with linting and type hints.

EDUCATION

B.Sc. in Information Systems Engineering In progress
Expected 2026–2027
Universidad Nacional (UNA), Costa Rica
➤ Relevant coursework: Data Structures & Algorithms, Databases, Software Engineering, Operating Systems, Statistics.

LEARNING ROADMAP & TARGET CERTIFICATIONS

➤ **In progress / planned:** PCEP/PCAP (Python Institute), pytest/CI pipelines, deeper static analysis (mypy strict, ruff); weekly LeetCode practice to keep DSA sharp for review and interviews.

LANGUAGES

Spanish: Native
• **English:** Professional working proficiency (B2), written and spoken
